

(1) Serious to fatal injury risk in car accidents as a percentage:

Type Of Injury	With Air Bag	Without Air Bag
Arm	0.65%	0.43%
Thorax	0.80%	1.25%
Head	0.49%	0.90%
Leg	0.87%	1.20%

This table compares the serious to fatal injury risk in car accidents as a percentage with and without an airbag for different types of injuries.

Graph:

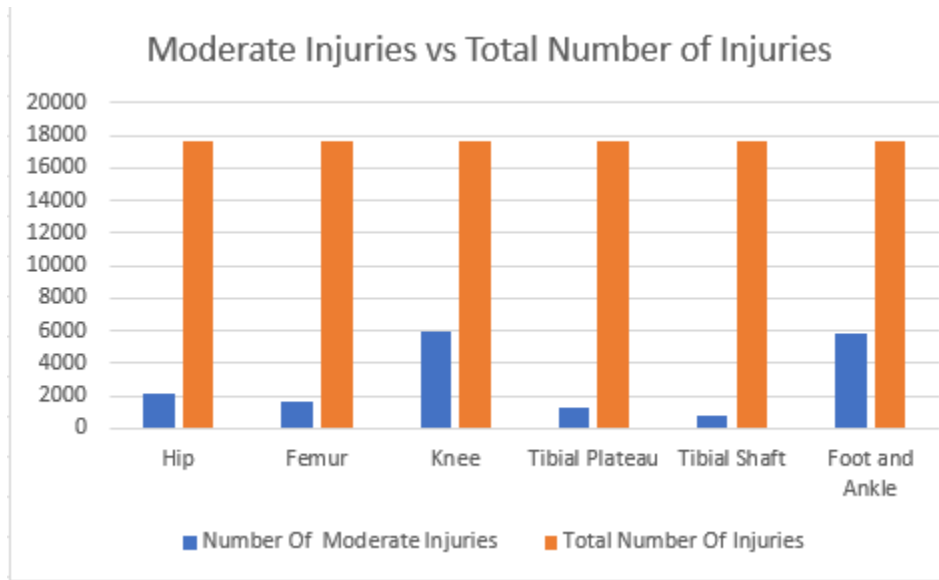

This graph compares the types of injuries with and without an airbag, showing that the risk of serious to fatal injuries is generally lower when an airbag is present.

(2) Average number of moderate injuries for car accidents:

Type Of Injury	Number Of Moderate Injuries	Total Number Of Injuries
Hip	2153	17669
Femur	1657	17669
Knee	5928	17669
Tibial Plateau	1257	17669
Tibial Shaft	794	17669
Foot and Ankle	5880	17669

This table shows the average number of moderate injuries for different types of injuries in car accidents, along with the total number of injuries.

Graph:

This graph shows how each type of injury relates to the total number of moderate injuries, with the knee and foot/ankle being the most common sites of moderate injury.
